

Any individual who tests positive for COVID-19 can inadvertently pass the virus to others asymptotically; that is, even if the individual has no symptoms of illness. Because of this, you can expect phone calls from MPH and a public health representative to identify any contacts you have had. This form can help you identify your contacts so you will be ready for the calls. Please complete this form as soon as you can to help safeguard the health and safety of our MPH community.

1

Identify your Contact Tracing Date

If you have had symptoms, enter the date you first felt sick,

OR if you have had no symptoms, enter the date of your COVID-19 test: ____/____/____

SUBTRACT 2 DAYS: ____/____/____ = YOUR CONTACT TRACING DATE

2

Identify your MPH and CNY Community Contacts

Effective contact tracing within our MPH community, as well as school/home partnership in following our safety protocols (e.g. completing the Daily Health Assessment, following the MPH Health Protocols, etc.), allows us to host classes on campus with minimal disruption to our community. Please do your best to share any details of situations outside of school when your family/child may have had contact with another MPH community member (students or employees). This information is critical to our ability to mitigate any exposure within our school.

The overall health and well-being of the CNY community is also a priority. The County Health Department will be connecting with you to contact trace any possible exposures within the community. Please use the form below to make notes on people with whom you have had contact since your contact tracing date above.

3

Make Your List. Use additional sheets of paper if necessary.

	Name of Person	Date of Contact	Activity
