

Little Learners for Pre-K

Tuesdays, 3:30-4:30 p.m.

January 21 – March 3 (no class Feb. 18)

Fee: \$110 includes all supplies

Reinforce essential skills with a fun, new approach based on the time-tested popularity of LEGO® Bricks! Introduce your child to the fun of learning through building and playing.

Using the Alphabet as the foundation, students explore shape, size, color, how much and how many, while focusing on concepts such as classifying and patterning. Through storytelling and creative building, they use increasing descriptive language as they build a variety of models and objects. Students will also be introduced to science in a fun, interactive way through science experiments and hands-on projects.

In all Bricks 4 Kidz after school enrichment classes, we Learn, we Build and we Play ... with LEGO Bricks! Through an interactive STEM PowerPoint lesson and by building with our specialized technic LEGO® kits, kids will begin to identify and understand early engineering principles.
